

Full Service

Why choose Full Service?

Full Service suits those wanting predictable and uninterrupted production through proactive maintenance. If high production value and delivery deadlines are crucial, we recommend this service model.

Full Service Process:

During Full Service, our technician will perform a thorough inspection of your system. The inspection is scheduled 2 months prior to the final service. The aim is to identify worn parts, allowing us to order and replace them at the final service visit.

The service also includes lubrication and adjustment to prevent mechanical wear. Our priority is to provide maintenance that ensures machines remain in good condition.

This service is more comprehensive than the other service models. If desired, our technician can review your spare parts inventory and recommend parts relevant to your system.

Full Service includes:

- Initial visit for a detailed inspection
- Statutory review as per Machinery Directive 2006/42/EC
- Safety review and testing
- Spare parts consultation
- Preparation of a quote for worn machine parts
- Service visit to replace ordered parts
- Lubrication of chains, bearings and moving parts
- Adjustment and testing of machines
- Service checklist

Benefits of Full Service:

- High uptime and minimal production stoppages
- Reduced costs for unforeseen repairs
- High awareness of machines' condition
- Advice on recommended spare parts
- Extended machine service life

OBS: Det lovpligtige eftersyn af maskiner og sikkerhed er inkluderet i denne service. Ønsker du ikke dette eftersyn, bedes dette oplyst under afsnittet "særlige ønsker til service".
