

Medium Service

Why choose Medium Service?

Medium Service is for those seeking to prevent mechanical wear, damage and production stoppages through thorough maintenance.

Proces for Medium Service:

Inspection

Our technician conducts a condition assessment for wear on all mechanical components.

Service

During the inspection, we lubricate, adjust and replace parts available in the service van.

Quote

We provide a quote for the additional spare parts that should be replaced.

Parts are sent

A technician visits to replace additional parts, or you can choose to do it yourself.

During Medium Service, our technician will inspect your machines. At the same time, lubrication and adjustments are performed to prevent mechanical wear. We will replace parts with significant wear and if required parts are not available in the service van, you will receive a quote. You decide whether to stock the parts, replace them yourself, or request Fisker to replace. Our technician is available for consultation and review.

This service also includes the statutory review.

Medium Service includes:

- Inspection
- Statutory review as per Machinery Directive 2006/42/EC
- Safety review and testing
- Service and replacement of machine parts
- Lubrication of chains, bearings and moving parts
- Adjustment and testing of machines
- Service checklist
- Preparation of a quote for spare parts

Benefits of Medium Service:

- Increased uptime and fewer production stoppages
- Reduction of mechanical wear and consequential damage
- Awareness of machines' condition

NOTE: The statutory machine and safety review is included in this service. If you do not wish for this review, please mention it in the "special service requests" section.
