

UPGRADE YOUR SUPPORT

Now you can upgrade the support on your machines with a support box and camera from Fisker. This allows us to assist you more efficiently in the event of faults or breakdowns on your machines.

A support box allows our experienced support technicians to connect to your machines and troubleshoot via the machines' PLC program in a fast and easy way.

A portable camera which stores video recordings for up to 24 hours gives our support technicians eyes-on-site and a better understanding of the problem at hand - even after the problem has occurred.
