

Light Service

Why choose Light Service?

Light Service is ideal for those who wish to lower service expenses while accepting longer potential machine and production stoppages due to lengthy spare parts delivery times. It may also suit those with skilled personnel capable of handling the maintenance themselves.

Light Service Process:

Inspection

Our technician conducts a condition assessment for serious wear on critical components.

Quote

We provide a quote for the spare parts that should be replaced.

Parts are sent

You will receive the spare parts and can either replace them yourself or opt for a technician visit.

During Light Service, our technician will inspect your machines. We will identify wear on machine parts and prepare a quote for parts with serious wear. If parts with critical wear are available in the service van, the technician can replace them on-site.

Light Service offers insights into your machines' condition and enables better planning to avoid production stoppages by stocking parts with the highest risk of failure.

This service also includes the statutory review.

Light Service includes:

- Inspection
- Statutory review as per Machinery Directive 2006/42/EC
- Safety review and testing
- Machine testing
- Inspection checklists
- Preparation of a quote for spare parts

Benefits of Light Service:

- Low service costs
- Awareness of machines' condition

NOTE: The statutory machine and safety review is included in this service. If you do not wish for this review, please mention it in the "special service requests" section.
